Connecting to the MSMC fileserver using SFTP

- You will need to download and install an FTP client that supports SFTP to the computer you wish to access the fileserver from. For example, I recommend FileZilla which is available at the following link: <u>https://filezilla-project.org/download.php?type=client</u>
- 2. Once installed, open FileZilla and click on the site manager icon in the upper left corner (outlined in red in the image below):

🔁 FileZilla								
File Edi	t View	Transfer	Serv					
₩ -								
Host:			Use					

- 3. Click New Site in the lower left of the open window to create a new connection and change the name if desired. This connection will be saved for future use.
- 4. In the open window enter the following information:

General	Adva	anced	Transfer Settings	Charset		
Protocol: SFTP		SFTP	- SSH File Transfer	Protocol		\sim
Host:		rtsfmsmc.bch.msu.edu			Port: 22	
Logon T	ype:	Norm	al			\sim
User:		mssf	tp			
Passwor	d:	••••	•••••			

- 5. Use password provided by the Mass Spec facility when entering the connection password.
- 6. Click the **Connect** button to connect to the server.
